

# 539. Minimum Time Difference

Medium 1.6K 240

Companies

Given a list of 24-hour clock time points in "HH:MM" format, return *the minimum **minutes** difference between any two time-points in the list.*

## Example 1:

**Input:** timePoints = ["23:59","00:00"]  
**Output:** 1

## Example 2:

**Input:** timePoints = ["00:00","23:59","00:00"]  
**Output:** 0

## Constraints:

- `2 <= timePoints.length <= 2 * 104`
- `timePoints[i]` is in the format "**HH:MM**".
